Learning Catalytics: Transfer Learning Catalytics data to Mastering gradebook

If you want to transfer student data from the Learning Catalytics Gradebook to the Mastering Gradebook, edit the module and check the Gradebook Transfer option.

When you end the session at the end of class, student data is saved and sent to the Learning Catalytics Gradebook. Students' scores for that session are also sent to the Mastering Gradebook, if you have selected the Gradebook Transfer option for the module.

If you edit a module and change the settings, such as the point value of questions or the weighting of correct answers vs participation or individual vs team answers, the Gradebook automatically updates the scores of all sessions created from that module, and these updates are automatically transferred to the Mastering Gradebook.

Note that session scores that have been manually edited do not update when settings are updated.

If you no longer want Learning Catalytics scores to transfer to the Mastering Gradebook, edit the module and deselect Gradebook Transfer. Scores are no longer transferred and all previously transferred scores are removed.

If you wish to transfer them again, reselect Gradebook Transfer.
